

Cardiology Terminology Glossary

SYNTHETIC TEST DATA — This document was generated for RAG system development and testing only. It does not represent real clinical guidance, a real hospital policy, or real patient information. Do not use for actual patient care.

Document ID: DOC_060 | Type: terminology | Domain: cardiology

Purpose

A reference glossary of common terms used across cardiology screens, workflows, and documentation.

Terms

Term	Definition
Tachycardia	A heart rate above the normal resting range for the patient's age group.
Bradycardia	A heart rate below the normal resting range for the patient's age group.
Arrhythmia	An irregular heart rhythm.
QRS Complex	The portion of an ECG waveform representing ventricular depolarization.
ST Segment	The portion of an ECG waveform between ventricular depolarization and repolarization.
Lead Placement	The positioning of ECG electrodes on the body to capture cardiac electrical activity.
Sinus Rhythm	A heart rhythm originating from the sinoatrial node at a normal rate.
Myocardial Infarction	Damage to heart muscle due to interrupted blood supply.
Ejection Fraction	The percentage of blood pumped out of the heart's left ventricle with each contraction.
Telemetry	Continuous remote monitoring of a patient's cardiac rhythm.
Auscultation	Listening to internal body sounds, such as heart sounds, typically with a stethoscope.
Palpitations	A sensation of rapid, fluttering, or irregular heartbeat noticed by the patient.
Cardioversion	A procedure to restore a normal heart rhythm using an electrical shock or medication.
Holter Monitor	A portable device that continuously records ECG activity over an extended period.
Preliminary Interpretation	An initial, non-final read of a cardiology study pending formal sign-off.
